

**K4**

## Product Info

- ☞ product made of **natural calcium carbonate**,  
**very first** anti set-off spray powder,  
for more than 50 years on the market
- ☞ crystalline, rounded particles  
**- not hygroscopic and not soluble**
- ☞ inorganic, **mineral product**,  
**high specific gravity**,  
1.6 times higher than all other powders
- ☞ **no static charging**  
no thermal changing  
economical application - kinetic energy
- ☞ **giving no cause for concern to the aspect of health**  
no allergic reactions  
no irritation of respiratory tracts
- ☞ the only spray powder world-wide offering  
a wide **variety of granulation's**,  
for each application a suitable grain size

### Advantages:

*Because of its high specific gravity it can be applied at smallest formation of dust and it is very reliable and economical. A further advantage is the insensitivity to static charges. This ensures a regular powdering without important vorticity; small pollution on and around the press, i.e. less cleaning intervals. Furthermore stable against thermal and climatic influences.*

### Please pay regard!

*An overdose may result in streaking – on colour areas – and may lead to increased abrasion in the downstream converting.*

***No safety recommendations are necessary.***
